Continue Work

↓

Progress = 100%

↓

Status = Completed

4. Task Assignment Workflow

HR
↓
Create Task
↓
Select Project
↓
Select Employee
↓
Enter Task Details
↓
Set Priority
↓
Set Start Date
↓
Set Due Date
↓
Click "Assign Task"
↓
Task saved in database
↓
Employee receives/sees task
↓
Employee starts work

5. Task Tracking Workflow

HR can see these changes from the **All Tasks / Task Details** page.

7. Complete System Workflow

Short Workflow Description

The **Employee Task Management System** starts with **user authentication**, where users log in according to **their assigned role**. **HR/Admin manages employees, departments, projects, and tasks**. **HR creates tasks** and **assigns** them to **specific employees** with priorities and deadlines. **Employees log in** to view their assigned projects and tasks. They **update task status, progress, and work updates** while completing their assigned work. **HR can monitor all tasks, review employee progress, and track completed and pending work**. The workflow ends when the **assigned task is completed**.

Timeline

Week 1 — Requirement Analysis & Project Planning

(Which one is almost completed)

Decide exactly what the system will contain before development starts.

Work to Complete

1. Understand the project requirement.
 2. Decide the purpose of the employee task system.
 3. List all modules/pages.
 4. Identify different user roles.
 5. Decide what each role can access.
 6. Create the basic workflow.
 7. Decide the database requirements.
 8. Decide the responsibility of each team member.
 9. Create the initial project structure.
 10. Decide naming conventions and coding structure.
-

Week 2 — Database + Basic Project Setup

Ishika + Foram → Backend

Start:

- Database creation
- User table
- Employee table
- Role/permission tables
- Project table
- Task table
- Task status table
- Work handover table
- Other required tables

- Database relationships
- Primary/foreign keys

Foram + Nandini — Common Design

Start:

- Header
- Footer
- Sidebar
- Navigation
- Dashboard layout
- Common buttons
- Forms
- Tables
- Cards
- Modal structure

Dhruvi — Page Structure

Start creating:

- Login page
- Dashboard page
- Employee page
- Project page
- Task page

At this stage, pages don't need complete functionality.

Gopika

Start preparing:

- CSS structure
- Responsive layout structure
- Common classes
- Form styling
- Table styling

Output: Database foundation + common website structure.

Week 3 — Authentication + Main Pages

Ishika + Foram

Develop:

- Login
- Logout
- Session management
- User authentication
- Password handling
- Role-based access
- Permission checking

Foram + Nandini

Complete:

- Header
- Sidebar
- Footer
- Navigation
- Dashboard layout
- Responsive common components

Dhruvi

Continue:

- Employee pages
- Project pages
- Task pages
- Profile page
- User management pages

Gopika

Start CSS for completed pages.

Output: User can log in and access the appropriate system areas.

Week 4 — Employee & Project Management

Backend — Ishika + Foram

Employee:

- Add employee
- Edit employee
- Delete/Deactivate employee
- View employee
- Search employee
- Filter employee

Project:

- Create project
- Edit project
- Project details
- Assign team members
- Project status

Dhruvi

Create the corresponding frontend pages.

Dhruvi + Gopika

Apply:

- CSS
 - Forms
 - Tables
 - Buttons
 - Responsive design
 - Validation UI
-

Week 5 — Task Management

Backend

Build:

- Create task
- Assign task
- Assign employee
- Task priority
- Task deadline
- Task description
- Task status
- Task comments
- Task attachments if required

Frontend

Create:

- Task listing

- Add task
- Edit task
- Task details
- Assigned tasks
- My tasks
- Completed tasks
- Pending tasks

CSS

Complete the design of these pages.

Output: Complete basic task management system.

Week 6 — Task Status + Dashboard

Task statuses

For example:

Pending → Assigned → In Progress → Review → Completed

Dashboard

Display:

- Total employees
- Total projects
- Total tasks
- Pending tasks
- In-progress tasks
- Completed tasks
- Overdue tasks
- Recently assigned tasks

Team responsibilities

Ishika + Foram: Backend logic

Nandini: Common UI corrections

Dhruvi: Dashboard/page integration

Copika: CSS/responsive design

Week 7 — Frontend + Backend Integration

For every page:

Frontend page → Form → Backend → Database → Response → Frontend

Output: Main modules connected and working together.

Week 8 — Testing

Test everything.

Functional testing

Check:

- Login
- Logout
- Employee creation
- Employee editing
- Project creation
- Task creation
- Task assignment
- Task status
- Work handover
- Notifications
- Reports
- Search

- Filters
- Forms

Database testing

Check:

- Data insertion
- Data updating
- Data deletion
- Relationships
- Duplicate data
- Missing data

UI testing

Check:

- Desktop
- Tablet
- Mobile
- Forms
- Tables
- Buttons
- Modals
- Sidebar
- Header/footer

All members participate.

Week 9 — Bug Fixing + Improvements

Create a **Bug List**.

Example:

Bug	Module	Assigned To	Status
Login validation issue	Login	Ishika	Pending
Task not updating	Task	Foram	Pending
Mobile table issue	Task	Gopika	Pending
Sidebar issue	Layout	Nandini	Pending
Handover status issue	Handover	Ishika	Pending

Week 10 — Final Testing

Final testing

Every module should be tested again after bug fixing.
