Employee Task Management System

Simple Language Project Document

What is it?	A website where HR can manage employees, projects and tasks, and employees can see and update their
Recommended technology	PHP + PDO + MySQL + HTML/CSS/JavaScript
Main users	HR/Admin and Employees

1. What Is This System?

This system is a website for managing employee work. HR can create employees, projects and tasks. Employees can log in with their email and password and see the projects and tasks given to them.

The main idea is simple:

HR creates and assigns work → Employee works on it → Employee updates the task → HR checks the progress.

2. Who Will Use the System?

HR / Admin

• Can see all employees.

• Can create employee login accounts.

• Can create projects.

• Can assign employees to projects.

• Can create and assign tasks.

• Can see all employees' tasks.

• Can check task progress.

• Can see pending, completed and overdue tasks.

• Can view reports.

Employee

• Can log in with email and password.

• Can see their own dashboard.

• Can see their assigned projects.

• Can see their assigned tasks.

• Can see task details and deadlines.

• Can update task status.

• Can add progress updates/comments.

• Can see completed and pending tasks.

3. Login System

There can be one common login page.

```
Email
[_________________]

Password
[_________________]

[ LOGIN ]
```

After login, the system checks the user's role.

User	After Login
HR	HR Dashboard

User	After Login
Employee	Employee Dashboard

The employee should never be able to open HR pages. HR can access the complete system.

4. HR Dashboard

The HR dashboard should give a quick view of the whole system.

Dashboard box	What it shows
Total Employees	Number of employees
Total Projects	Number of projects
Total Tasks	All tasks
Pending	Tasks not started
In Progress	Tasks currently being worked on
Completed	Finished tasks
Overdue	Tasks whose deadline has passed

Below these boxes, HR can see a list of recent tasks.

5. Employee Dashboard

When an employee logs in, they should see only information related to their work.

Section	Example
My Projects	Website Project, CRM Project
My Tasks	Login Page, Payment Page
Pending Tasks	5
In Progress	2
Completed	10
Upcoming Deadline	Login Page – 25 Sep

The employee should not automatically see another employee's private tasks.

6. Employee Management

HR should have an Employee page.

Name	Email	Department	Status
John Doe	john@example.com	Development	Active
Sarah Smith	sarah@example.com	Marketing	Active

HR can:

• Add employee

• Edit employee information

• Activate/deactivate employee

• Reset password

• View employee's tasks

7. Departments

HR can create departments such as:

• Development

• Design

• Marketing

• Sales

• HR

• Accounts

Each employee can be connected to one department.

8. Projects

A project is a larger piece of work. For example: Website Development, CRM System, Mobile App or Marketing Campaign.

Project information

• Project name

• Description

• Start date

• End date

• Project status

• Project members

One project can have many employees.

9. Tasks

Tasks are the main part of this system. HR creates a task and gives it to an employee.

Example

```
Project: Website Development
Task: Create Login Page
Assigned To: John Doe
Priority: High
Start Date: 21 Sep
Due Date: 24 Sep
Status: Pending
```

Task information

• Project

• Task title

• Task description

• Assigned employee

• Assigned by HR

• Priority

• Start date

• Due date

• Status

• Progress

• Optional file/attachment

10. Task Status

Status	Simple meaning
Pending	Task is assigned but work has not started.
In Progress	Employee is working on it.
Completed	Employee has finished it.
Overdue	Deadline has passed and the task is not completed.

Overdue can be calculated automatically. There is no need for HR to manually change a task to Overdue.

11. Task Details Page

When HR or the employee opens a task, the page can show:

• Task title

• Project

• Description

• Assigned employee

• Priority

• Start date

• Due date

• Status

• Progress

• Task updates

• Comments

• Attachments

Example progress history:

```
21 Sep – Started working on the task.
22 Sep – Login design completed.
23 Sep – Database connection completed.
```

12. Employee Task Update

Employees should be able to update their work.

For example:

```
Status: In Progress

Update:
Login page design is completed. I am now working on validation.

[ Submit Update ]
```

HR can then see this update from the HR side.

13. Comments

A simple comment section can be added to each task.

```
HR: Please complete the validation today.

Employee: Sure, I will complete it today.
```

This keeps task-related communication in one place.

14. HR – All Tasks

HR should have one page where all tasks are visible.

Employee	Project	Task	Priority	Due Date	Status
John	Website	Login Page	High	24 Sep	In Progress
Sarah	Marketing	Banner	Medium	27 Sep	Pending
David	CRM	Customer API	High	22 Sep	Completed

HR can filter this page by employee, project, department, priority, status and date.

15. Search and Filters

Useful filters for HR:

• Employee – show tasks for one employee

• Project – show tasks for one project

• Department – show tasks for one department

• Status – Pending/In Progress/Completed/Overdue

• Priority – Low/Medium/High

• Date – show tasks between two dates

• Search – search task title or employee name

16. Notifications

The system can show notifications when something important happens.

Event	Who gets notification?
New task assigned	Employee
Task deadline coming soon	Employee
Task becomes overdue	Employee and HR
Task completed	HR
Task reassigned	New employee

17. Reports

HR can later have a Reports page.

Employee	Assigned	Completed	Pending	Overdue
John	25	18	5	2
Sarah	20	16	3	1
David	30	21	6	3

Useful reports include employee workload, completed tasks, pending tasks, overdue tasks and project progress.

18. Database – Simple Explanation

The database stores all system information.

Table	Stores
users	HR and employee login information
departments	Department names
projects	Project information
project_members	Employees connected to projects
tasks	All task information
task_updates	Employee/HR progress updates
task_comments	Task comments
notifications	System notifications

Simple relationship

```
Employee → Project → Task → Status → Update

Example: John → Website Project → Login Page → In Progress → 80% complete
```

19. Suggested Folder Structure

```
employee-task-management/
■■■ admin/
■ ■■■ dashboard.php
■ ■■■ employees.php
■ ■■■ projects.php
■ ■■■ tasks.php
■ ■■■ addtask.php
■ ■■■ reports.php
■■■ employee/
■ ■■■ dashboard.php
■ ■■■ projects.php
■ ■■■ tasks.php
■ ■■■ taskdetails.php
■■■ auth/
■ ■■■ login.php
■ ■■■ logout.php
■ ■■■ forgot-password.php
■■■ includes/
■■■ uploads/
■■■ admin/config.php
```

20. Security

• Passwords should be stored securely using password_hash().

• Use password_verify() during login.

• Use PDO prepared statements for database queries.

• Check the user's role before showing HR pages.

• Check that an employee owns a task before showing the task.

• Use CSRF protection for important forms.

• Validate uploaded files.

• Do not store passwords as normal text.

21. Development Steps

Step	What to build
1	Database and login system
2	HR dashboard
3	Employee management
4	Department management
5	Project management
6	Task creation and assignment
7	Employee dashboard
8	Employee task updates
9	HR all-task page and filters
10	Notifications and reports
11	Testing and security

22. Final System Flow

```
HR Login
↓
HR Dashboard
↓
Create Employee
↓
Create Project
↓
Add Employees to Project
↓
Create Task
↓
Assign Task to Employee
↓
Employee Login
↓
Employee sees My Projects and My Tasks
↓
Employee works on task
↓
Employee updates status/progress
↓
HR checks progress
```

23. Best First Version (MVP)

For the first version, keep the system simple. Build these features first:

• Login for HR and employees

• HR employee management

• Projects

• Project members

• Tasks

• Task assignment

• Employee dashboard

• My Projects

• My Tasks

• Task status

• Task progress updates

• HR All Tasks page

• Basic filters

• Basic dashboard counts

After this version is working properly, add comments, attachments, notifications, reports, calendar view and other advanced features.

24. In One Sentence

HR manages the employees, projects and tasks; employees log in to see their own work, update their tasks, and HR can monitor everything from the HR panel.
